

Red Team Attack Execution Report

Project: HawkEye Lab

Objective:

To identify vulnerabilities and gain unauthorized access to the target system to evaluate its security posture.

Tools Used: Nmap, Hydra.

Attack Tactics & Execution:

1. **Reconnaissance:** Conducted a comprehensive port scan using Nmap to identify open ports on the target IP. Discovered that Port 22 (SSH) and Port 80 (HTTP) were actively open.
2. **Vulnerability Identification:** Identified that the SSH service was exposed to the public network without rate limiting.
3. **Exploitation:** Executed a brute-force dictionary attack using Hydra against the SSH service (Port 22) to crack the administrator login credentials.
4. **Post-Exploitation:** Successfully bypassed the login mechanism, gained root access to the system, and successfully accessed the internal directories.

Conclusion:

The target system is highly vulnerable to brute-force attacks due to the lack of strict password policies and exposed SSH ports.

[Evidence / Execution Logs]

```
Starting Nmap 7.92 ( https://nmap.org ) at 2026-09-11
Nmap scan report for HawkEye-Target (192.168.1.105)
PORT      STATE SERVICE
22/tcp    open  ssh
80/tcp    open  http

Nmap done: 1 IP address (1 host up) scanned in 2.45 seconds
```
